

Does Cyber Crucible comply with Japan's APPI?

Short answer: Cyber Crucible supports a business operator's obligations under Japan's Act on the Protection of Personal Information (APPI) by minimizing data and processing locally. It collects no customer content, credentials, or keys, so the handling, third-party-provision, and cross-border-transfer rules have minimal surface in its custody.

How it aligns

- **Safe handling** — encryption, access control, and endpoint protection.
- **Cross-border transfer** — on-premises deployment supports keeping personal data in Japan; no customer content is transferred offshore for security processing.
- **Breach support** — incident information to support APPI reporting expectations.

Vendor-selection notes

APPI amendments strengthened breach reporting and cross-border rules; the minimal data footprint keeps vendor obligations light. Documentation is available on request.
