

Does Cyber Crucible comply with Singapore's PDPA?

Short answer: Cyber Crucible supports an organization's obligations under Singapore's Personal Data Protection Act as a data intermediary that processes on the endpoint and collects no customer content, credentials, or keys. The Protection and Transfer Limitation obligations have little to attach to, because there is minimal personal data in its custody.

How it aligns

- **Data-intermediary role** under a written contract.
- **Protection obligation** — encryption, access control, and endpoint prevention.
- **Transfer limitation** — on-premises deployment and no offshore transfer of customer content for security processing.

Vendor-selection notes

Singapore's PDPA includes a mandatory data-breach notification regime; prompt incident information supports it. A data processing agreement is available on request.
